Risk Profile

Aggressive

You can afford to take on a higher level of risk because of your investment time horizon and/or your appetite for risk. You know that in taking the risk, you need to be patient if you want to achieve the results. So you are willing to invest for the long-term and are prepared to tolerate some volatility in the short term, in anticipation of the higher returns you expect to receive over the longer term.

- Where return and risk figures are quoted for periods greater than 12 months, these returns are annualised. In other words, they are scaled to represent an equivalent one year measure.
- VAR represents the statistical loss that the Fund can experience given its current holdings over a one Month period with a 1% probability.
- Sources of leverage are from equity and / or fixed interest derivatives provided by the Prime Broker. The types and sources of leverage are based on strategies that implement derivatives, short selling and borrowed money as by the Prime Broker. Leverage is calculated using the Commitment approach.
- Portfolio stress testing is performed by subjecting a portfolio through extreme market situations, and noting the portfolio profit and loss, value at risk and exposure movements.
- In some circumstances asset hypothecation exists and is limited within the contracting arrangements with the different counter parties.

*The legal registered name of this portfolio is: Saffron Sanlam Collective Investments Qualified Hedge Fund One MDD as at 30 September 2021
Issue Date: 12 October 2021

Fund Objective

The objective of the fund is to provide consistently superior risk-adjusted returns to investors through exploiting opportunities that present in interest rate and derivative markets.

Fund Strategy

The portfolio shall invest in a combination of assets in liquid form including cash, cash equivalents, money market instruments, listed and unlisted interest rate instruments, corporate and sovereign bonds, preference shares and listed property. The portfolio shall be permitted to invest in listed and unlisted financial instruments (derivatives) including but not limited to interest rate derivatives, currency derivatives and commodity derivatives. The Manager shall be permitted to invest in offshore investments as legislation permits. The Portfolio may also invest in participatory interests of portfolio of collective investment schemes registered in the Republic of South Africa or of participatory interests in collective investment schemes or other similar schemes. The 10 day 99% VAR shall be limited to 20% of the NAV.

Asset Management Fee	1.15% p.a. payable monthly
Broker Advisory Fee (max)	1.15%
Performance Fee	20% of profits above (i) STeFI and (ii) the high water mark, payable quarterly

The performance fee is accrued daily, based on performance over a rolling one year period with payment to the manager being made monthly. Performance fees will only be charged once the performance fee benchmark is outperformed. A copy of the Performance Fee Frequently Asked Questions can be obtained from our website: www.sanlaminvestments.com

Total Expense Ratio (TER) | PERIOD: 01 June 2019 to 31 March 2021

Total Expense Ratio (TER) | 3.99% of the value of the Financial Product was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Inclusive of the TER of 3.99%, a performance fee of 0.26% of the net asset value of the class of participatory interest of the portfolio was recovered.

Transaction Cost (TC) | 0.07% of the value of the Financial Product was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) | 4.06% of the value of the Financial Product was incurred as costs relating to the investment of the Financial Product.

Administered by:

Collective Investment Schemes (CIS)

Collective Investment Schemes (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.

Distributions

The income that is generated from an investment and given to investors through quarterly distribution payouts.

Fixed-interest investments

Fixed interest funds invest in bonds, fixed-interest and money market instruments. Interest income is a feature of these funds and, in general, capital should remain stable. A fixed-interest investment aims to offer investors a regular income at a set interest rate, which can be fixed over a specified term. If interest rates fall, the fixed interest investment typically becomes more valuable. Conversely if interest rates rise, the value of the investment will fall. The interest provides you with a fixed amount at regular intervals. So this is usually a very predictable way of getting an income from your investment.

LISP (Linked Investment Service Providers)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust-based investments. Any investment made through these products gives an investor a single point of entry into a selection of different investments.

Leverage

This refers to the use of various financial instruments or borrowed capital, such as margin, to increase the potential return of an investment.

Value at Risk (VaR)

A statistical technique used to measure and quantify the level of financial risk within a firm or investment portfolio over a specific time frame. Value at risk is used by risk managers in order to measure and control the level of risk which the firm undertakes. The risk manager's job is to ensure that risks are not taken beyond the level at which the firm can absorb the losses of a probable worst outcome.

Encumbrance or Rehypothecation

The practice by banks and brokers of using, for their own purposes, assets that have been posted as collateral by their clients. Clients who permit rehypothecation of their collateral may be compensated either through a lower cost of borrowing or a rebate on fees.

Total Expense Ratio (TER)

This is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

Qualified Investor

Any person, who invests a minimum investment amount of R1 million per hedge fund, and who –

- (a) has demonstrable knowledge and experience in financial and business matters which would enable the investor to assess the merits and risks of a hedge fund investment; or
- (b) has appointed a FSP who has demonstrable knowledge and experience to advise the investor regarding the merits and risks of a hedge fund investment;

Qualified Investor Hedge Fund or QI Fund (QIF)

A hedge fund in which only qualified investors may invest.

Sanlam Collective Investments (RF) Pty Ltd ("SCI") is a registered and approved Manager in Collective Investment Schemes in Securities and is a member company of the Sanlam Group. The Sanlam Group is a full member of the Association for Savings and Investment SA. The management of investments are outsourced to the authorised Financial Services Provider ("FSP") as stated in this Minimum Disclosure Document ("MDD").

While CIS in hedge funds differ from CIS in securities (long-only portfolios) the two may appear similar, as both are structured in the same way and are subject to the same regulatory requirements. The ability of a portfolio to repurchase is dependent upon the liquidity of the securities and cash of the portfolio. A manager may, in exceptional circumstances, suspend repurchases for a period, subject to regulatory approval, to await liquidity and the manager must keep the investors informed about these circumstances. Further risks associated with hedge funds include: investment strategies may be inherently risky; leverage usually means higher volatility; short-selling can lead to significant losses; unlisted instruments might be valued incorrectly; fixed income instruments may be low-grade; exchange rates could turn against the fund; other complex investments might be misunderstood; the client may be caught in a liquidity squeeze; the prime broker or custodian may default; regulations could change; past performance might be theoretical; or the manager may be conflicted.

The information contained in this MDD does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act, and should be read in conjunction with the Upfront Disclosure Document. Use of or reliance on this information is at own risk. Independent professional financial advice should be sought before making an investment decision. Collective investment schemes are generally medium-to long-term investments. The portfolio may invest in other unit trust portfolios which levy their own fees, and may result in a higher fee structure for our portfolio. This fund has no Initial Fees. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The fund may from time to time invest in foreign instruments. If the fund holds assets in foreign countries it could be exposed to the following risks regarding potential constraints on liquidity and the repatriation of funds: macro-economic, political, foreign exchange, tax, settlement and potential limitations on the availability of market information. The fund launched in 2016. The Manager has the right to close any portfolios to new investors to manage the fund more efficiently in accordance with their mandates. The Manager retains full legal responsibility for the third-party named portfolio. The portfolio management of all the portfolios is outsourced to financial services providers authorised in terms of the Financial Advisory and Intermediary Services Act, 2002. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value ("NAV") basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. Where referenced, annualised returns describe the average amount of money earned by an investment each year over a given time period. Cumulative return is the aggregate return of the portfolio for a specified period. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. Please note that past performance is not necessarily a guide to future performance, and that the value of participatory interests / units in investments / unit trusts may go down as well as up. The promulgation of hedge fund regulations in 2015 prompted the launch of this fund on the stated launch date. The Saffron SCI* Qualified Hedge Fund One was formerly registered as the S-Alt Zeta Qualified Hedge Fund. The name change was approved with a change of investment policy, and as such the historic fund performance ceased to exist when the Saffron SCI fund was approved in 2019. The level of counterparty exposure is restricted to funds that are administered by Sanlam Collective Investments and the respective prime brokers of the underlying portfolio. A schedule of fees and charges and maximum commissions is available from the Manager, SCI. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge on the SCI website (www.sanlamcollectiveinvestments.com).

Administered by:

The fund returned 2.45% and 16.88% for the quarter and year respectively, while the benchmark (STeFI Index) returned 0.95% and 2.80%. On a rolling one-year basis, the fund beat the cash benchmark by 13.08%.

Global risk sentiment will likely remain volatile, sensitive to the threat of a mutating virus, any signs of persistent inflation and potential shifts in international monetary policies. These uncertainties are likely to subdue risk appetites and provide a headwind for continued appreciation in asset prices.

In Developed Markets, the US Fed held rates unchanged within the range of 0.00% to 0.25%, and maintained the pace of asset purchases to at least USD80bn of Treasuries and USD40bn of agency mortgage-backed securities. The FOMC however did move a step closer to asset tapering as progress towards the Fed's inflation and employment goals continued 'broadly as expected'. Fed Chair Jerome Powell revealed in a subsequent press conference that the Fed could announce tapering at its November meeting and cease purchases around mid-2022. GDP growth is expected to reach 5.9% for 2021 (7.0% previously), and 3.8% and 2.5% in 2022 and 2023 (previously 3.3% and 2.4%) respectively. The PCE inflation forecast is now 4.2% for 2021 (previously 3.4%) and 2.2% for 2022 (previously 2.1%). The unemployment rate is expected to increase to 4.8% from 4.5% in 2021, 3.8% in 2022 and 3.5% in 2023. Over the quarter the Dollar Index (DXY) strengthened by +1.76% (94.23), the US 10-year bond yield lifted slightly to 1.51% (up 3 bps for the quarter) and 3-month USD LIBOR traded 1 bp lower at 0.13%.

The European Central Bank (ECB) held the Deposit rate at -0.50%, the Main Refinancing rate at 0.00% and the Marginal Lending rate at 0.25%. The ECB announced that the pace of asset purchases would be reduced, arguing that favourable financing conditions could be maintained with a 'moderately lower' pace of purchases than in the past two quarters. Inflation is forecasted at 2.2% (previously 1.9%), 1.7% (previously 1.5%) and 1.5% (previously 1.4%) for 2021, 2022 and 2023 respectively. The consensus view is that the expected rise is temporary, driven by factors such as high energy prices, the reversal of the temporary VAT reduction in Germany and global raw materials shortages. The GDP growth forecast now stand at 5.0% (2021), 4.6% (2022) and 2.1% (2023). As with US rates, European yields lifted over the quarter: the German 10-year generic yield traded higher at -0.20%, the French 10-year yield closed at 0.15% and the UK generic 10-year at 1.02%.

The Commodity Research Bureau (CRB) Commodity Index (-0.10%) and CRB Metals Index (0.08%) were flat over the quarter, while the Food Index dropped by -3.15%. Oil continued to recover (+3.53%) over the quarter, rising above USD78 per barrel at quarter end. Most hard commodity prices however softened over the period, including Copper (-3.8%), Palladium (-30.9%), Platinum (-11.0%) and Gold (-1.1%) which were largely negative for resource driven economies, particularly in emerging markets.

The VIX Index, a measure of market volatility, traded higher at 23.1 at the end of the quarter (+7.7). The J.P. Morgan Emerging Market Bond Index (EMBI) Sovereign Spread lifted by 17.5 bps, ending the quarter at 373 bps. Emerging Market 5-year Credit Default Swaps widened, with South Africa at 214 (+26 bps), Brazil at 206 (+39 bps) and Turkey at 434 (+49 bps) at quarter end. The rand continued to weaken against the dollar, depreciating by 4.4% to 15.07. The currency also weakened against the euro to 17.46 (-2.1%) and against the pound to 20.31 (-2.2%).

In South Africa, the Property sector again was the top performing asset class for the quarter at +5.94%. Highly illiquid Inflation-linked bonds (CILI Total Return) returned +2.02%, followed by cash (STeFI) at +0.95%, nominal bonds (ALBI Total Return) at +0.37%, and equity (ALSI Total Return) at -0.84%. Over the past 12 months, Property has been the top performing asset class at +54.43% and cash the worst performer at +3.80%.

The SARB voted unanimously to keep the repo rate unchanged at 3.50%, in line with market expectations. The tone of the statement became slightly more hawkish than the previous one, with the SARB's QPM adding 225 bps in rate hikes to the repo rate by the end of 2023 (a 25bps hike in the fourth quarter of 2021, followed by hikes of 25bps in each quarter of 2022 and 2023). The MPC inflation view was broadly unchanged, with headline inflation forecast to average a slightly higher 4.4% in 2021 (from 4.3% previously) and unchanged at 4.2% and 4.5% for 2022 and 2023 respectively. The risk to inflation is to the upside, driven by higher global producer inflation, robust global food prices, elevated and volatile oil prices, and upward pressure on domestic electricity and other administrative prices. The SARB revised its 2021 GDP forecast up to 5.3% from 4.2% previously. GDP growth expectations for 2022 and 2023 were revised lower to 1.7% and 1.8% (from 2.3% and 2.4%) respectively. Risks to the growth outlook are considered broadly balanced.

SA headline inflation for August accelerated to 4.9% yoy from 4.6% in July. The rise largely reflects some of the base effects caused by the lockdown last year. The main contributors were 'food and non-alcoholic beverages' and 'transport'. Food inflation accelerated by 7.4% yoy from 7.0% in the preceding three months. Transport prices advanced by 9.9%, driven by fuel prices, up 19.6% yoy from 15.2% in July. Core inflation edged higher to 3.1% from 3.0% in July. Once low base of 2020 has dissipated, inflation will likely ease towards the 4.5% midpoint of the SARB's target range.

SA GDP grew by 1.2% qoq (4.7% annualised) in 2Q21 from 1.0% in the previous quarter. Year-on-year, the economy expanded by 19.3% from a 2.6% yoy contraction in the previous quarter, mainly due to base effects. Five of ten industries recorded growth, the most significant contribution from the broad transport sector, followed by trade and personal services. Value added by manufacturing, finance and government services declined over the period. Weaker performance is expected for the third quarter, reflecting the impact of a stricter lockdown and the destructive riots in Kwazulu-Natal and parts of Gauteng.

The 3-month JIBAR rate moved 1 bp lower to 3.68%, while 12-month JIBAR rose by 14bps to 4.93%. The 12-month Treasury average yield rose 5bps to 5.04%. Foreigners were large net sellers of bonds in September (-R35.2bn), bringing the cumulative outflow over the past 12 months to R87.5bn. The short end of the yield curve steepened notably by the end of September (an increase of 26.5bps for the R2023 and 31bps for the R186) in line with rate and risk expectations. Bond returns across the curve were positive to flat for the quarter, with the 1-3 years bucket returning +1.52%, the 3-7 years bucket returning +1.17%, the 7-12 years bucket +0.22% and the 12+ years bucket -0.01%. Over 12 months bonds produced strong returns, the strongest performer being the 12+ years bucket, generating +17.59%. According to the SARB's Statement of Assets and Liabilities, the accumulated government bond holdings at the end of August were R41.6bn, a R33.5bn cumulative increase since secondary market bond-buying was announced in March 2020.

At the end of 3Q 2021, the fund was 2.29x geared, with an effective 22.77% allocation to cash. The largest asset class exposures were to Floating Rate Notes (54.03%) and Fixed Rate Bonds (20.93%). The Value-at-Risk (VaR) risk measure (99% confidence, 10-day period) calculated by the independent risk managers stood at 2.77%. The asset-pool is expected to outperform the gearing cost going forward, given the significant difference in the gearing cost versus the gross running yield of the underlying assets (7.04% per annum).

The fund aims to enhance total return through value opportunities that, on a geared and risk-adjusted basis, achieve or exceed our hurdle return of STeFI.
