Risk Profile

Where the asset allocation contained in this MDD reflects offshore and equity exposure, the portfolio is exposed to currency and equity risks. The portfolio is exposed to default and interest rate risks. Therefore, it is suitable for medium term investment horizons. The expected potential long-term investment returns are lower but less volatile over the medium to long term than higher risk portfolios.

The Saffron BCI Active Bond Fund is an actively managed fixed interest portfolio that invests mainly in nominal and inflation linked government bonds and corporate bonds, with the aim to provide inflation beating returns.

In order to achieve this objective, the investments normally to be included in the portfolio will comprise a combination of assets in liquid form and a combination of bonds and interest-bearing securities, including loan stock, debentures, debenture bonds, notes, money market instruments, corporate debt and non-equity securities. The portfolio may also invest in participatory interests and other forms of participation in portfolios of collective investment schemes. The portfolio may from time to time invest in listed and unlisted financial instruments. The manager may also include forward currency, interest rate and exchange rate swap transactions for efficient portfolio management purposes.

Information & Disclosures

Additional information, including application forms, annual or quarterly reports can be obtained from BCI, free of charge or can be accessed on our website www.bcis.co.za.

Valuation takes place daily and prices can be viewed on our website (www.bcis.co.za) or in the daily newspaper.

Actual annual performance figures are available to existing investors on request.

Upon request the Manager will provide the investor with portfolio quarterly investment holdings reports.

* Monthly Fixed Admin Fee

R15 excl. VAT which will apply to all direct investor accounts with balances of less than R100 000 at month end, unless an investor transacts online, in which case no such fee will be levied.

** Total Expense Ratio (TER)

Please note: A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. Transaction Costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, the investment decisions of the investment manager and the TER. The prior year ("PY") TER and Transaction cost calculations are based upon the portfolio's direct costs for the financial year ended 31 December 2023, whilst the underlying portfolios' ratio and cost calculations are based upon their most recent published figures, being 30 June 2024.

Risks

Certain investments - including those involving futures, options, equity swaps, and other derivatives may give rise to substantial risk and might not be suitable for all investors. Where foreign securities are included in the portfolio there may be additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information.

Effective Annual Cost

Boutique Collective Investments adopted the ASISA Standard on Effective Annual Cost ("EAC"). The EAC measure allows you to compare charges on your investments as well as their impact on your investment returns prior to investing. For further information regarding the ASISA Standard on Effective Annual Cost and access to the EAC calculator please visit our website at www.bcis.co.za. BCI calculates the EAC as per the ASISA standard for a period of 3 years up till the most recent TER reporting period.

FAIS Conflict of Interest Disclosure

Please note that your financial advisor may be a related party to the co-naming partner and/or BCI. It is your financial advisor's responsibility to disclose all fees he/she receives from any related party. The portfolio's TER includes all fees paid by portfolio to BCI, the trustees, the auditors, banks, the co-naming partner, underlying portfolios, and any other investment consultants/managers as well as distribution fees and LISP rebates, if applicable. The portfolio's performance numbers are calculated net of the TER expenses. The investment manager earns a portion of the service charge and performance fees where applicable. In some instances, portfolios invest in other portfolios which form part of the BCI Scheme. These investments will be detailed in this document, as applicable.

Disclaimer

Boutique Collective Investments (RF) (Pty) Ltd is part of the Apex Group Ltd. Boutique Collective Investments (RF) (Pty) Ltd ("BCI") is a registered Manager of the Boutique Collective Investments Scheme, approved in terms of the Collective Investments Schemes Control Act, No 45 of 2002 and is a full member of the Association for Savings and Investment SA.

Collective Investment Schemes in securities are generally medium to long term investments. The value of participatory interests may go up or down and past performance is not necessarily an indication of future performance. The Manager does not guarantee the capital or the return of a portfolio. Collective Investments are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees, charges and maximum commissions is available on request. BCI reserves the right to close the portfolio to new investors and reopen certain portfolios from time to time in order to manage them more efficiently. Additional information, including application forms, annual or quarterly reports can be obtained from BCI, free of charge.

Performance figures quoted for the portfolio is from Morningstar, as at the date of this document for a lump sum investment, using NAV-NAV with income reinvested and do not take any upfront manager's charge into account. Income distributions are declared on the exdividend date. Actual investment performance will differ based on the initial fees charge applicable, the actual investment date, the date of reinvestment and dividend withholding tax.

Investments in foreign securities may include additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information.

Boutique Collective Investments (RF) Pty Ltd retains full legal responsibility for the third party named portfolio.

Income funds derive their income from interest-bearing instruments in accordance with Section 100(2) of the Act. The yield is a current yield and is calculated daily.

Although reasonable steps have been taken to ensure the validity and accuracy of the information in this document, BCI does not accept any responsibility for any claim, damages, loss or expense, however it arises, out of or in connection with the information in this document, whether by a client, investor or intermediary. This document should not be seen as an offer to purchase any specific product and is not to be construed as advice or guidance in any form whatsoever. Investors are encouraged to obtain independent professional investment and taxation advice before investing with or in any of BCI/the Manager's products.

Please refer to the retention portfolio's MDD for the portfolio's performance disclosures including the impact of the retention portfolio.

Fund Manager Quarterly Comment - As at 30 September 2024

Over the quarter, the fund (Class A) returned 5.36%, underperforming the benchmark (ALBI) which returned 10.54%. The average return for the South African Interest Bearing – Variable Term ASISA category was 9.32%. Domestic Bonds (2.58%), net Offshore Exposure (1.60%) and Domestic Floating Rate Notes (0.56%) were the main contributors to the return over the quarter. The fund's annual performance showcased significant strength, delivering a solid return of 18.88% compared to the benchmark's 26.14% and category average of 23.84%.

The fund strategy aims to manage downside risk while providing more moderate participation during bond rallies compared to the ALBI. In contrast, peer groups often track the ALBI closely, leading to potential short-term outperformance or underperformance relative to the Saffron BCI Active Bond Fund. However, the Saffron BCI has consistently delivered top-quartile performance over the long term. Over the rolling three-year period, the fund achieved an annualised return of 10.76%, slightly trailing the benchmark's 11.14%.

The US Federal Open Market Committee (FOMC) surprised economists by cutting interest rates by 50 bps to a range of 4.75%–5.00%, marking the first cut of the current rate cycle. Chair Powell attributed the decision to softer payroll data and insights from the Beige Book, despite having previously ruled out larger rate reductions. The updated dot plot suggests two more 25 bps cuts this year and a further 100 bps in 2025, targeting a neutral policy stance. Economic forecasts reflected steady GDP growth, a modest rise in unemployment, and inflation approaching target. Powell emphasised recalibration rather than aggressive easing, though market reactions indicated expectations of further 50 bps cuts. Over the quarter, yields on US 5-year and 10-year bonds tightened by 83 bps and 62 bps, respectively, while the US Dollar Index declined by 4.87%. Looking over the year, 5-year and 10-year yields fell by 107 bps and 80 bps, respectively, with the DXY down by 5.14%.

The European Central Bank (ECB) Governing Council reduced the key Deposit rate by 25 bps to 3.50%, marking the second step in its easing cycle. This technical adjustment, along with cuts to the Main Refinancing and Marginal Lending rates, is in line with balance sheet normalisation rather than a shift in policy stance. Inflation forecasts remain steady, with core inflation edging higher and energy and food prices coming in weaker than expected. GDP growth projections for 2024 and 2025 were revised slightly downwards due to softer consumption and exports, although the ECB remains positive about long-term growth prospects. The ECB is expected to continue gradual rate reductions, likely in 25 bps increments at quarterly meetings, although financial markets anticipate a faster pace if economic conditions deteriorate. The Deposit rate is forecasted to reach 2.25% by the end of 2025.

The Bank of England (BoE) kept its Bank Rate steady at 5.00%, as widely expected, with eight members voting in favour and one opposing vote for a 25 bps cut. Despite pressure from the US Federal Reserve's recent 50 bps rate reduction, the BoE maintained a cautious stance, citing no significant new developments. The BoE also confirmed plans to reduce UK government bond holdings by GBP 100 billion over the next year. Inflation is projected to rise to 2.50% by year-end. The pound surged to multi-year highs against both the dollar and the euro, while the FTSE 100 saw a slight dip, and European stocks rallied in response to the Fed's move.

The VIX Index, a key gauge of market volatility, closed at 16.73, reflecting a rise of 4.29 points. The J.P. Morgan Emerging Market Bond Index (EMBI) Sovereign Spread tightened by approximately 10 basis points, ending the quarter at 394 bps, with the index delivering a positive return of 6.07%, supported by lower US interest rates. South Africa's 5-year Credit Default Swap (CDS) spread narrowed further by 31 bps to 178 bps, while Brazil's tightened by 18 bps to 152 bps, and Turkey's by 12 bps to 269 bps. In the energy sector, Brent crude oil ended the quarter at USD 72.00 per barrel, down 15.50%. Commodity price movements, critical for many emerging market economies, showed mixed results. The CRB Food Index returned -0.27%, while the CRB Commodities Index posted a modest gain of 0.18% and the CRB Metals Index rose by 1.46%. Among metals, gold, palladium, iron ore, and copper performed well, with returns of 5.40%, 3.20%, 2.50%, and 2.34%, respectively, though platinum declined by 0.82%. Over the past 12 months, gold emerged as the best-performing metal, delivering a robust return of 42.77%, while oil was the weakest, falling by 22.11%.

The South African rand appreciated by 5.09% against the US dollar during the quarter, closely mirroring trends in the metals markets. This correlation highlights the significant influence of commodity prices, particularly platinum, copper, and gold, on South Africa's export-driven economy. Over the past year, the USD/ZAR exchange rate rose by 8.75%, reflecting movements in the CRB Metals Index, which gained 10.67% over the same period. In addition to its strength against the dollar, the rand also posted gains against the euro (+1.33%) but depreciated slightly against the pound (-0.44%) over the quarter. Among South African asset classes, listed property (JSAPYTR Index) led with a quarterly return of 18.70%, followed by nominal bonds (ALBTR Index) at 10.60% and equities (JALSHTR Index) at 9.62%. Over the past year, property emerged as the top-performing asset class. delivering an impressive return of 51.34%.

The South African Reserve Bank's (SARB) Monetary Policy Committee (MPC) delivered its first repo rate cut since 2020, reducing it by 25 bps while maintaining a cautious outlook. This decision was in line with expectations, reflecting optimism about improving global conditions and a favourable inflation outlook. However, the MPC emphasised that this modest cut should not signal the start of aggressive easing, underscoring the data dependency of future decisions and highlighting potential risks. Inflation forecasts for 2024 were lowered to 4.6%, with core inflation revised to 4.4%. The MPC noted positive developments in food and fuel prices but remained cautious regarding electricity prices. Growth prospects were seen improving, supported by stable electricity supply and rising business confidence, though risks from global instability and domestic challenges persist. The 3-month JIBAR rate tightened to 8.05% (down 30 bps), while the 12-month T-bill average yield fell significantly to 8.30% (from 9.03%). The South African bond market continued to react positively to the outcome of the national elections, with bonds rallying on the back of this stability. The SAGB yield curve saw substantial tightening, with the short-end R186 and R2032 yields narrowing by 81 bps and 127 bps, respectively, and the long-end R209 and R2040 yields tightening by 131 bps and 136 bps, respectively.

Looking ahead, while major central banks have begun their rate-cutting cycles, risks remain from potential inflation surprises, particularly against the backdrop of volatile energy markets and ongoing global geopolitical tensions. The fund is strategically positioned to align with current economic conditions by maintaining positions in both the short and long ends of the rates market. This strategy allows us to benefit from stable policy rates in the short term while seizing opportunities in longer-duration bonds to capture higher yields amidst normalised inflation expectations. The fund's duration decreased to 1.56 years from 3.77 years at quarter-end, taking profit into bond strength, compared to the benchmark's duration at 5.99 years. The fund also continues to offer an attractive gross running yield of 10.02%.
