Fund Objective

The Fund's investment objective is to generate a high level of income and capital appreciation over the medium to long term.

Investment Policy

The portfolio will apart from assets in liquid form, invest solely in the participatory interests of the Saffron FR Global Enhanced Income Fund, established under the Prescient Global Funds ICAV domiciled in Ireland. The underlying portfolio invests primarily in debt and debt-related securities issued by governments and corporations listed on global recognised exchanges. To the extent that the assets in the portfolio are exposed to exchange rate risk, the manager may enter into financial transactions for the exclusive purpose of hedging such exchange rate risk subject to the conditions and limits as stipulated by the Act.

Fund Information

Fund Manager	Brandon Quinn
Launch Date	Friday, 4 November 2022
Fund Size	ZAR 96.76 million
NAV Price (Fund Inception)	100.00 cents
NAV Price as at month end	109.12 cents
JSE Code	SAFFA

Transaction Cut Off Time	14:00
Regulation 28 Compliant	No

Risk Profile

Low-Moderate Risk

Where the asset allocation contained in this MDD reflects offshore and equity exposure, the portfolio is exposed to currency and equity risks. The portfolio is exposed to default and interest rate risks. Therefore, it is suitable for medium term investment horizons. The expected potential long-term investment returns are lower but less volatile over the medium to long term than higher risk portfolios.

Risk Statistics (3 Year Rolling)

Standard Deviation	8.07

Information & Disclosures

Additional information, including application forms, annual or quarterly reports can be obtained from FR, free of charge or can be accessed on our website www.fundrock.co.za.

Valuation takes place daily and prices can be viewed on our website (www.fundrock.co.za) or in the daily newspaper.

Actual annual performance figures are available to existing investors on request.

Upon request the Manager will provide the investor with portfolio quarterly investment holdings reports.

* Monthly Fixed Admin Fee

R15 excl. VAT which will apply to all direct investor accounts with balances of less than R100 000 at month end, unless an investor transacts online, in which case no such fee will be levied.

** Total Expense Ratio (TER)

Please note: A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. Transaction Costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, the investment decisions of the investment manager and the TER. The prior year ("PY") TER and Transaction cost calculations are based upon the portfolio's direct costs for the financial year ended 31 December 2025, whilst the underlying portfolios' ratio and cost calculations are based upon their most recent published figures, being 30 June 2026.

Risks

Certain investments - including those involving futures, options, equity swaps, and other derivatives may give rise to substantial risk and might not be suitable for all investors. Where foreign securities are included in the portfolio there may be additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information.

Effective Annual Cost

Fundrock Collective Investments adopted the ASISA Standard on Effective Annual Cost ("EAC"). The EAC measure allows you to compare charges on your investments as well as their impact on your investment returns prior to investing. For further information regarding the ASISA Standard on Effective Annual Cost and access to the EAC calculator please visit our website at www.fundrock.co.za. FR calculates the EAC as per the ASISA standard for a period of 3 years up till the most recent TER reporting period.

FAIS Conflict of Interest Disclosure

Please note that your financial advisor may be a related party to the co-naming partner and/or FR. It is your financial advisor's responsibility to disclose all fees he/she receives from any related party. The portfolio's TER includes all fees paid by portfolio to FR, the trustees, the auditors, banks, the co-naming partner, underlying portfolios, and any other investment consultants/managers as well as distribution fees and LISP rebates, if applicable. The portfolio's performance numbers are calculated net of the TER expenses. The investment manager earns a portion of the service charge and performance fees where applicable. In some instances, portfolios invest in other portfolios which form part of the FR Scheme. These investments will be detailed in this document, as applicable.

Disclaimer

Fundrock Collective Investments (RF) (Pty) Ltd is part of the Apex Group Ltd. Fundrock Collective Investments (RF) (Pty) Ltd ("FR") is a registered Manager of the Fundrock Collective Investments Scheme, approved in terms of the Collective Investments Schemes Control Act, No 45 of 2002 and is a full member of the Association for Savings and Investment SA.

Collective Investment Schemes in securities are generally medium to long term investments. The value of participatory interests may go up or down and past performance is not necessarily an indication of future performance. The Manager does not guarantee the capital or the return of a portfolio. Collective Investments are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees, charges and maximum commissions is available on request. FR reserves the right to close the portfolio to new investors and reopen certain portfolios from time to time in order to manage them more efficiently. Additional information, including application forms, annual or quarterly reports can be obtained from FR, free of charge.

Performance figures quoted for the portfolio is from Morningstar, as at the date of this document for a lump sum investment, using NAV-NAV with income reinvested and do not take any upfront manager's charge into account. Income distributions are declared on the ex-dividend date. Actual investment performance will differ based on the initial fees charge applicable, the actual investment date, the date of reinvestment and dividend withholding tax.

Investments in foreign securities may include additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information.

Fundrock Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the third party named portfolio.

Income funds derive their income from interest-bearing instruments in accordance with Section 100(2) of the Act. The yield is a current yield and is calculated daily.

Although reasonable steps have been taken to ensure the validity and accuracy of the information in this document, FR does not accept any responsibility for any claim, damages, loss or expense, however it arises, out of or in connection with the information in this document, whether by a client, investor or intermediary. This document should not be seen as an offer to purchase any specific product and is not to be construed as advice or guidance in any form whatsoever. Investors are encouraged to obtain independent professional investment and taxation advice before investing with or in any of FR / the Manager's products.

Please refer to the retention portfolio's MDD for the portfolio's performance disclosures including the impact of the retention portfolio.

Access the FR Privacy Policy and the FR Terms and Conditions on the Fundrock website (www.fundrock.co.za).

SAFFRON FR GLOBAL ENHANCED INCOME FEEDER FUND | CLASS A | MDD as at 30 September 2026
Issue Date: 22 October 2026

The Saffron Global Enhanced Income Fund returned -1.68% in the third quarter of 2026, compared with +1.70% for the SOFR + 3% benchmark. Over the twelve months to 30 September 2026, the Fund returned +1.59%, while the benchmark gained +6.86%. US Treasuries were the largest detractor from performance during the quarter.

The third quarter of 2026 was characterised by positive but increasingly differentiated performance across global risk assets, alongside a material increase in bond-market volatility. Global equities advanced, supported by resilient developed-market growth and continued investor demand for larger, higher-quality companies. However, the quarter was less supportive for small-cap and broad emerging-market equities, while South African markets experienced pronounced sector dispersion. Fixed-income markets were influenced by greater uncertainty around inflation, monetary policy and the path of longer-dated interest rates.

Global equity markets delivered moderate gains during the quarter. The S&P 500 increased by 2.03%, while the MSCI World Index advanced by 1.60%. Market leadership shifted towards value: the MSCI World Value Index gained 3.42%, compared with a decline of 0.16% from the MSCI World Growth Index. This relative performance suggests that the equity rally broadened beyond the growth and technology exposures that had dominated earlier periods, although the rotation was not uniform across market capitalisations.

Small-cap equities were notably weaker. The MSCI World Small Cap Index declined by 4.08% during the quarter, materially underperforming both the broader developed-market index and large-cap US equities. This divergence is consistent with an environment in which higher financing costs, tighter credit conditions and uncertainty around the interest-rate outlook placed greater pressure on companies with less diversified earnings, weaker balance sheets or more immediate refinancing requirements.

Emerging-market performance was mixed. The broad MSCI Emerging Markets Index declined by 1.05%, while MSCI Emerging Markets Asia fell by 1.70%. Latin America gained 3.05%, and emerging Europe produced stronger gains, with the MSCI Emerging Markets Europe IMI advancing by 8.53%. The dispersion indicates that regional and country-specific exposures were more important than a single emerging-market risk factor. Commodity sensitivity, currency movements, domestic policy conditions and the composition of local equity markets all contributed to the divergence.

Currency markets were comparatively stable at the headline level but remained important for regional returns. The US Dollar Index increased by 0.22% during the quarter. The rand weakened marginally against the US dollar, with USD/ZAR increasing by 0.15% from 16.43 to 16.45. The rand strengthened by approximately 0.53% against the euro but weakened by approximately 0.32% against sterling. The euro declined by 0.68% against the US dollar. These movements were modest relative to the currency volatility experienced in earlier periods, but they still affected the translation of offshore returns for South African investors.

The most significant change in the global fixed-income environment was the sharp rise in bond-market volatility. The MOVE Index ended the quarter at its highest recorded level in the quarter. By contrast, the VIX equity-volatility index was broadly unchanged, declining from 16.45 to 16.34. The divergence between equity and bond volatility suggests that investors remained comparatively comfortable with near-term corporate earnings while becoming materially less certain about the future path of inflation, central bank policy and longer-dated government-bond yields.

This divergence has important implications for income portfolios. Elevated rate volatility can create attractive entry points in high-quality government and corporate bonds, but it also increases the risk of capital losses. In this environment, carry remains valuable, but the reliability of that carry depends on disciplined duration management, robust credit selection and sufficient liquidity to respond when market pricing becomes dislocated.

Credit conditions were influenced by the tension between positive equity-market performance and elevated interest-rate uncertainty. Resilient large-cap equities and relatively contained equity volatility supported risk appetite, but the increase in bond volatility raised the hurdle for adding lower-quality or longer-duration credit.

Portfolio construction will continue to emphasise diversified sources of income. High-quality shorter-dated instruments provides attractive carry with lower duration sensitivity, while selective exposure to longer-dated government securities become attractive when volatility creates a sufficient spread margin. Credit exposure will remain concentrated in issuers with strong liquidity, credible access to capital and adequate capacity to absorb a period of slower growth or persistently high funding costs.

Looking ahead, the principal risk is that bond-market volatility migrates into credit spreads and equity valuations. A sustained rise in long-term yields will increase refinancing costs, place pressure on highly leveraged issuers and challenge equity-market multiples. Conversely, clearer evidence of moderating inflation and a more predictable monetary-policy path will reduce rate volatility and support duration-sensitive assets. The wide dispersion across regions, market capitalisations and sectors also creates opportunities for active allocation.

The Fund's positioning into the fourth quarter should remain valuation-led, liquid and focused on the quality and durability of income. The objective is to capture attractive all-in yields while retaining sufficient flexibility to adjust duration and credit exposure as market pricing changes.
